

WGCNA network validation

Parameter sensitivity, module stability under subject resampling, and a matched noise null. 39 samples, 2176 proteins.

A

Soft-power selection

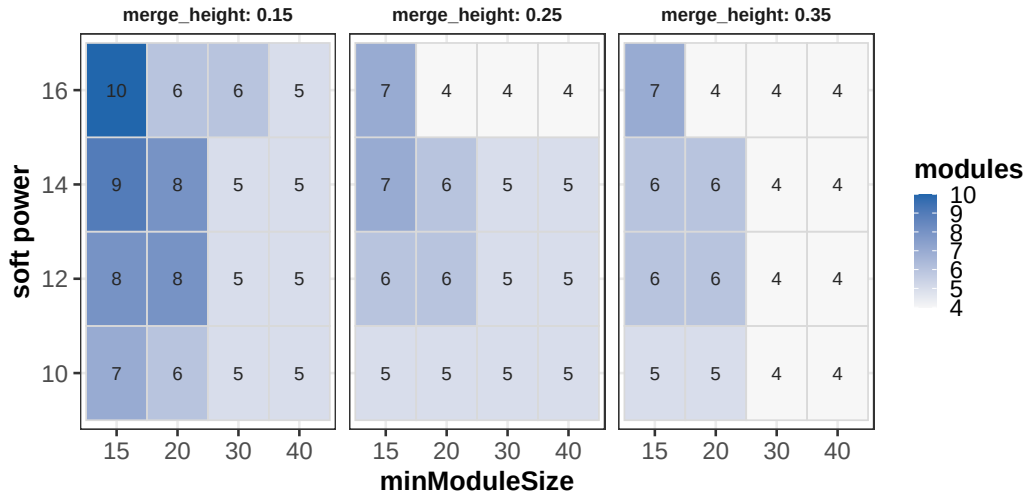

dashed = 0.90 criterion; red = chosen power 14

B

Modules found across parameters

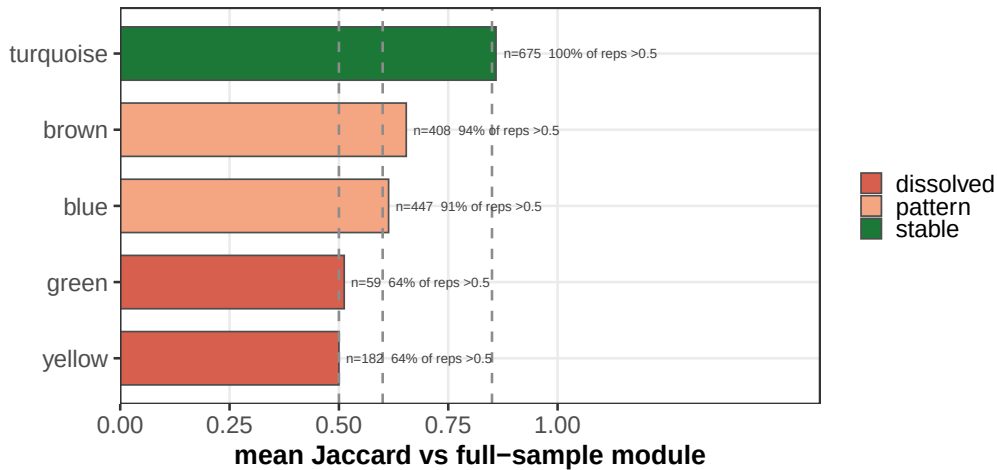

the 5-module result is a parameter choice, not a fixed property

C

Module survival under subject resampling

100 subsamples at 80% of subjects; Hennig thresholds 0.5 / 0.6 / 0.85

D

Modules recovered from noise

25 permuted datasets; green line = observed (5)
