

A

N = 1943 | 69 DEPs (. SPARSE) | 14 enriched (FDR) | . = 0.22

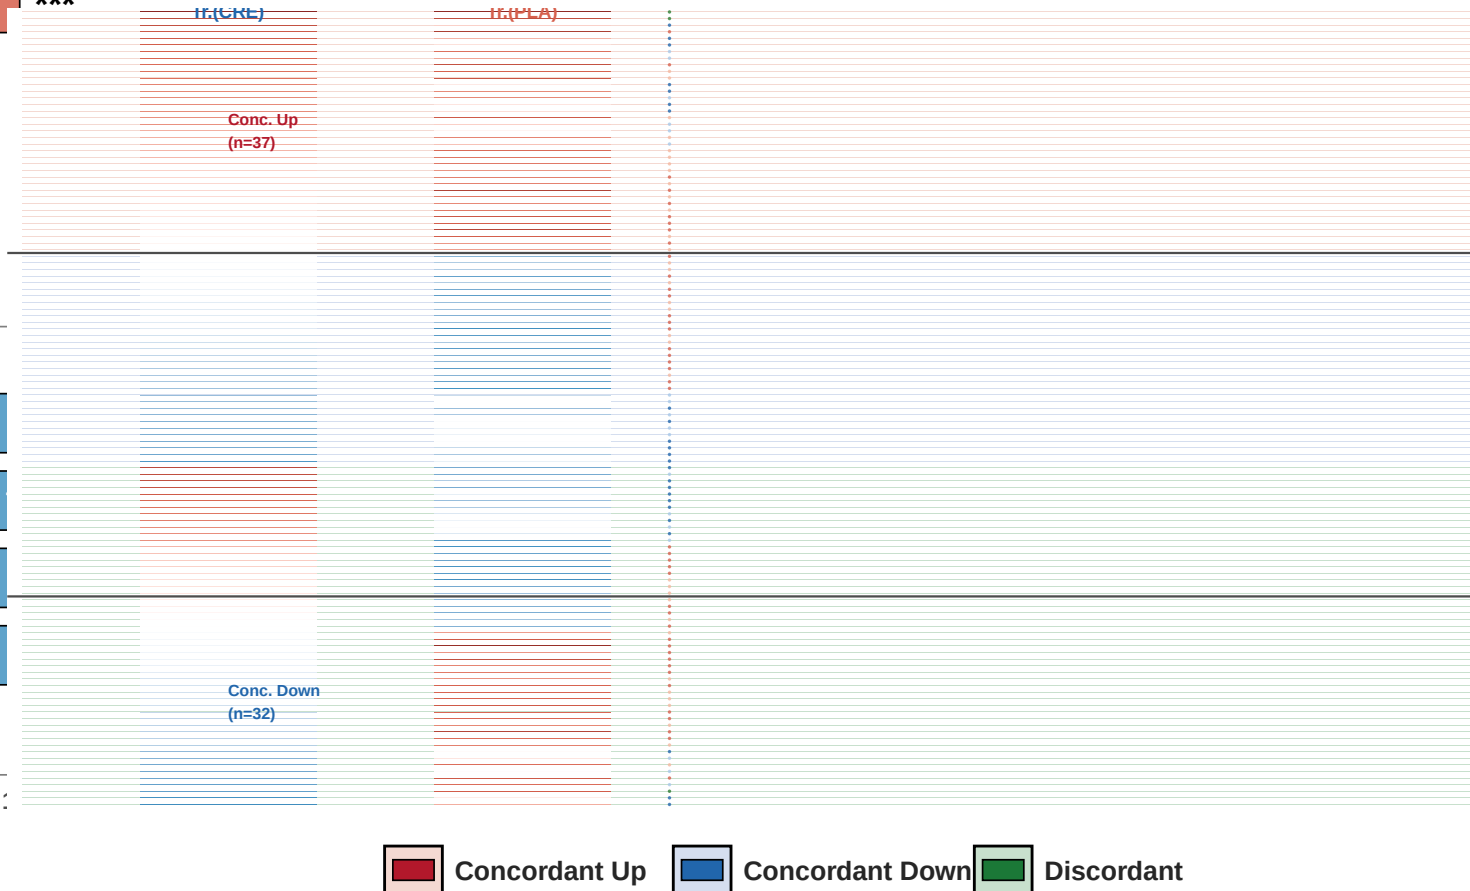

B

121 proteins (≤ 0.10) | 3 patterns

Protein-to-Pathway

121 proteins (<0.10 relaxed threshold – see caption) | 3 patterns

C

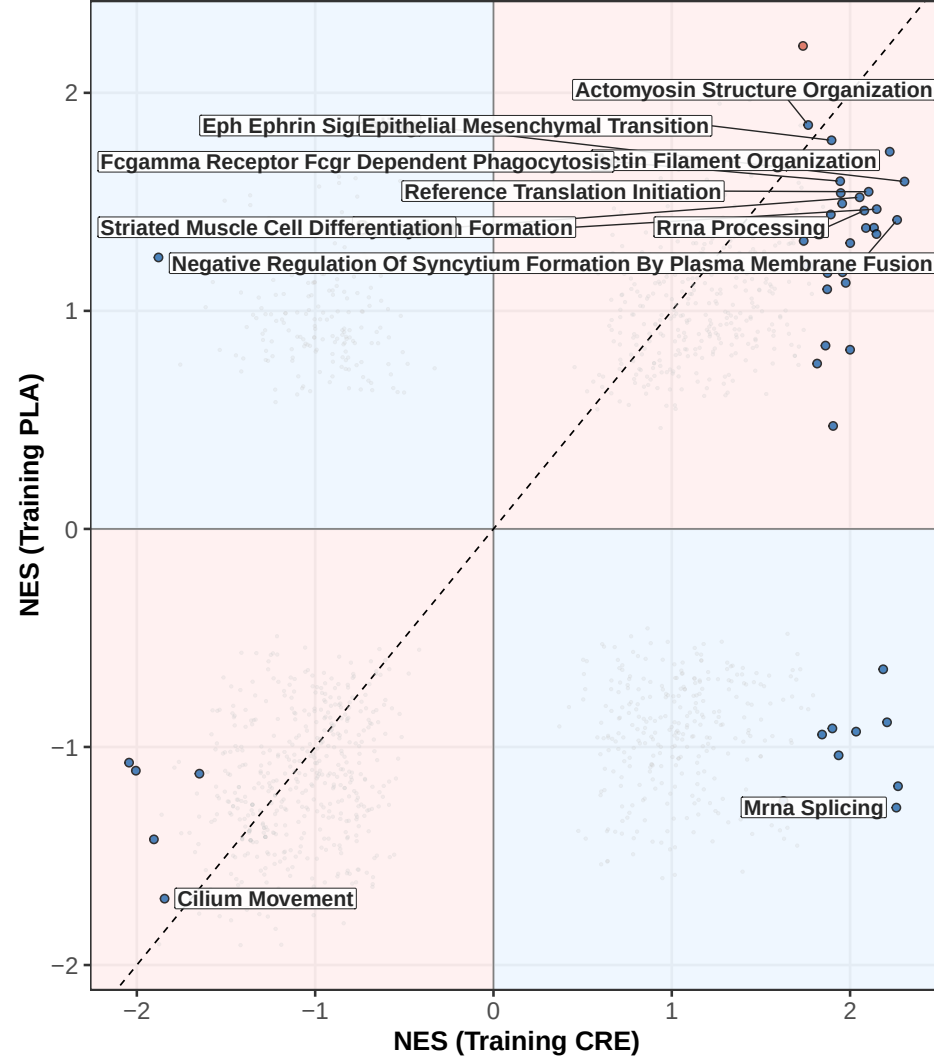

$n = 1943 \mid r = 0.215$

fry: Training Concordance

CRE leading-edge genes vs Training_PLA t-stats | n = 1943 proteins | 0 DEPs at $.<0.05$ (uses pathway leading-edges)

D

Pathway concordance (IGSEANES)
 0.46 0% concordant (sig-both)

 $\beta = 0.46$ [95% CI 0.41–0.50] | 45 sig pathways (CRE+PLA combined) | primary si

E

RRHD2: Inthreshold=Free Concordance
1943 proteins | max 18.1

1943 proteins | warm diagonal = shared training signature (CRE = PLA)
